Abstract of EP0834248

The trimmer has a working head with a cutting tool, a drive for this and a handle for guiding the head. The handle is spaced away from the head by a stem (4) of the head and is joined to it so that the head can be adjusted relative to it. The head can be pivoted about at least one axis relative to the handle, preferred axes being at right angles to the longitudinal axis of the stem and parallel to this axis. The cutting tool can be brought into a position parallel to the stem. The head can be pivoted by at least 30 deg., but preferably 180 deg., to opposite sides of the stem.
